

Buy Magiscard Helix Uno & Helix Duo Card Printers

Choose Magiscard Helix Uno for printing single-sided cards or Helix Duo for dual-sided printing. Featuring retransfer technology, the Helix Uno and Duo offer stunning print quality and over-the-edge surface coverage. Both models are made for high-capacity printing and include an intuitive touch screen, USB and Ethernet connectivity for network printing, encoding options, and an industry-leading 3-year warranty. Plus, the Helix features Magiscard HoloKote secure watermarking technology.

Have questions about Magiscard Helix card printers? We have answers!

What are the main features and benefits of the Magiscard Helix?

The **Magiscard Helix** is the latest ID card printer retransfer printer from Ultra ID Magiscard. The Helix combines the latest technology including an intuitive touch screen interface, high-quality high-volume printing, and retransfer printer technology with Magiscard's unique HoloKote technology. The Magiscard Helix is capable of printing rich vibrant images on your ID cards from edge-to-edge and it's retransfer technology is ideal for printing cards that may have uneven surfaces (like prox cards, smart-cards, and punched cards). Some of the basic Magiscard Helix Printer features include:

- Single or dual-sided printing
- HoloKote technology
- An intuitive touch screen user interface
- USB and Ethernet connectivity, with optional wi-fi upgrade
- Multiple encoding options, including magnetic stripe and smart card technologies
- High-capacity consumables, including color ribbons with up to 1000 prints per ribbon
- Full edge-to-edge printing
- Three year manufacturers warranty on printer with a lifetime printhead warranty

Should I choose the single-sided or the dual-sided Magiscard Helix ID card printer?

Whether or not you need a dual-sided printer depends on the amount of information that you need to put on your cards. If you will only be placing very basic information on a card, such as a name and photo, the single-sided **Magiscard Helix Uno** might be the right choice for you. If you have require more information then will fit on one side of the card we would recommend the **Magiscard Helix Duo**. Additionally, the dual-sided printer may appeal to customers who want to print the same information on both sides of their card. These eliminates the need for no twist lanyards and badge reels because the ID will be visible no matter which direction it faces.

Many customers want to know if it is possible to print on both sides of the card with a single-sided printer by simply flipping the card and feeding it back through. This is not recommended because doing so exposes the cards to oil from your fingerprints as well as dust and other debris which can then damage the delicate printhead of the printer.

What is HoloKote technology?

HoloKote is a unique Magiscard feature available on many Magiscard printer models, but Magiscard Helix is unique in being the first retransfer printer with the HoloKote technology. HoloKote allows you to print a pattern on your cards similar to a watermark without any additional costs (like those associated with holographic laminates). The HoloKote pattern is printed onto the card during the normal printing process when using a YMCKS ribbon. Similar to a holographic laminate, the pattern is visible when the card is viewed at an angle. This feature can be enabled or disabled via the printer drivers and does not have to be created in the card design.

The Helix ID card printer comes equipped with 10 built-in watermark designs right in the printer. These include patterns such as waves, keys, globes and interlocking squares. If you would like to design your own HoloKote image that is possible as well with the purchase of a custom HoloKote key. The Magicard Helix is also compatible with the [Magicard HoloPatch](#) cards which feature a high visibility area on the card, which when printed on with the HoloKote mark closely resembles a holographic patch.
